DYNAMIC TEAM PAGE PLAN

1. Create two containers where each team member info will go inside.

2. Inside this container add the content that will be visible by default and create a section which will be hidden until we click a button, give this section a class of "cover" and in css make it display none and give it a position of absolute.

3. In css create a class of "cover-on" and make it display block.

4. In JavaScript create a reference to every button in the HTML.

5. Add an event listener function to every button.

6. In JS create a function that will reveal the content hidden by using the classList.add method.

7. In JS create a function that will hide the content by using the classList.remove method.
